DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of claims 1-11 in the reply filed on 1/5/2006 is acknowledged.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 2-3 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claims 2-3, applicant should clarify the magnetic structure of the element in order to provide initial relative magnetic permeability.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fredrickson [US 2,947,960].

Fredrickson discloses an element [figures 4-5] comprising:

- a plurality of ductile electrically conductive U-shape elements [19]; and
- a plurality insulating layer material disposed between the elements.

wherein the electrically conductive elements and the insulating layers forming a trough-like assembly.

Fredrickson discloses the instant claimed invention except for the specific thickness of the conductive element.

The specific thickness of the conductive element would have been an obvious design consideration for the purpose of providing intended inductance.

Regarding claims 2-3, the specific magnetic permeability would have been an obvious design consideration based on the intended applications/environments.

Regarding claims 6-9, Fredrickson discloses the conductive elements formed of conductive material. Copper is a well know conductive material. The specific material would have been an obvious design consideration for the purpose of providing electrical conducting and magnetic permeability.

Regarding claims 10-11, Fredrickson discloses the insulating material formed of mica, vanish, plastic, ect. The specific thickness and material of the insulating layer would have been an obvious design consideration for the purpose of providing insulation.

Conclusion
